

Sci-dip is a reliable digital health platform that aims at translating the latest scientific research to all.

Our initiative falls within the open science movement and has the profound ambition to make science truly open to all. It stems from the observation that although research should be useful to everyone, it remains niche and elitist. We aim to find the right tone, between expertise and popularization, to make information more accessible to fellow scientists as well as the general public. The model is simple: each article that we publish on our platform will be a lay rewriting of an academic paper already published in a peer reviewed journal. **We go the extra mile by giving readers the option to request articles on specific illnesses or to even ask health experts questions about given symptoms. We select experts from our pool of writers to act as consultants.**

You can publish on Sci-dip if:

1. You are a health expert

Graduate or medical student, PhD, medical doctor, pharmacist, psychologist, dentist, physiotherapist.

2. You choose a scientific paper

A review or a research paper (written by your or someone else) already published in a peer reviewed journal and that focuses on an illness or a symptom in your field of expertise.

3. You write a lay summary of that paper

500 to 1000 words (in English); Figure is optional

What's in it for you ?

- **Transfer scientific knowledge**
- **Promote our image** as health experts
- **Gain visibility** in your field of study
- **Get yourself a side-job with us**
→ as a digital health writer or consultant
- **Optimize your literature review process**
→ by publishing scientific briefs
- **Be part of the editorial board**
- **Work remotely**

Our commitment

Free knowledge for all

All published content will be available for free on our platform (no premium versions)

Readers will be able to support writers via participative financing

Sci-dip will not withhold participative revenues for at least the first year
